Education

Iowa State University
Bachelor's of Science in Software Engineering

May 2028

Experience

Iowa State University
Peer Mentor for Software Engineering Students

Ames, Iowa
Aug. 2026 - Present

- Guide first-year software engineering students by connecting them with academic resources, campus opportunities, and providing support to help them navigate their transition into college life successfully.
- Foster meaningful connections with mentees through semester check-ins, discussing academic progress, personal and professional goals, and challenges while, providing advice and support.

Wells Enterprises
Application Developer Intern

Le Mars, Iowa
May 2026 - Aug 2026

- Migrated 3 legacy business applications to Oracle APEX by provisioning required database tables, updating SQL queries and logic for compatibility, and performing comprehensive testing before deploying to production.
- Co-developed a package tracking app from scratch for Corporate Center, enabling package logging, pickup verification, automated email notifications, and photo documentation to reduce misplaced packages.
- Replaced hard-coded application values with configurable parameter tables, allowing administrators to update system settings directly through the database without modifying application code, improving maintainability.

Community Involvement

Iowa State University
VSA Programming Branch Advisor

Ames, Iowa
May 2026 - Present

- Serve as a resource for programming branch members by advising on university resources and school policies.
- Step in to support events and staffing gaps as needed, including supervising when the branch is short-staffed.

Iowa State University
VSA Event Manager

Ames, Iowa
Aug. 2025 - May 2026

- Collaborated with Executive Board Members in weekly meetings to propose, evaluate, and develop event concepts.
- Coordinated with multiple clubs and ISU faculty to plan and host events, including club fundraisers and charities.
- Introduced a system to track event attendance for archival purposes and identify trends in popular events.

Projects

RecipeRUs

- Collaborated in a four-person Scrum team to develop an Android application using Android Studio and Spring Boot to provide REST API endpoints that enable users to discover, search, and save recipes.
- Built the frontend components in Java using Android Studio and ensured seamless integration with backend APIs.
- Implemented CI/CD pipeline with 80% test coverage rate to automate testing and improving application reliability.
- Integrated WebSocket-based real-time chat functionality to provide users with immediate assistance.

Cy-Serve Delivery Robot

- Programmed a manual control system in C on a Tiva TM4C123 microcontroller, translating keyboard inputs from a PC GUI to real-time motor commands for a Roomba-based mobile robot.
- Integrated and calibrated IR and PING sensors to detect object distance and width, transmitting sensor data via UART back to the GUI for remote navigation and obstacle avoidance feedback.
- Debugged compilation errors and collaborated with a team of 5 to successfully navigate the robot to designated tables.

Personal Portfolio Website | [AndrewPhamGX.github.io](https://andrewphamgx.github.io)

- Developed a personal website using HTML and CSS to showcase projects and to further enhance web design skills.
- Built a personalized resume website by adapting a LinkedIn Learning template with custom design and content.
- Enhanced website functionality using JavaScript to add interactive UI and overall improve user engagement.

Skills

- *Programming:* Python, C, Java, JavaScript, SQL, HTML/CSS
- *Framework & Libraries:* React, Node.js, Express.js, Bootstrap
- *Tools:* Git, Visual Studio, IntelliJ IDEA, Eclipse, Android Studio, SQL Developer, Oracle APEX
